

Example Documentation Home

This folder demonstrates the main build benefit: a tree of Markdown files becomes a matching tree of PDFs with one command.

Marky

Markdown to PDF examples

What the build preserves

- Source files live under docs/.
- Generated PDFs land under output/.
- Nested paths stay nested, so links and review artifacts remain predictable.

Build command

```
npm run dev -- build --config examples/project-build/input/marky.config.json
```
