Market Readiness Report

Marky turns Markdown source material into reviewable PDF reports with a reproducible command-line workflow.

Executive Summary

The professional theme adds structured report sections around normal Markdown content while keeping the source file readable in code review.

Capability	Result
Cover page	Generated from document metadata
Contents	Built from authored headings
Pagination	Added through Chromium PDF footers
Back page	Uses plain-text contact details

Launch Notes

- Keep source documents in the repository.
- Configure defaults in frontmatter or `marky.config.json`.
- Disable individual generated sections with `false`.

Risk Register

The v1 table of contents intentionally omits page numbers because stable page-number extraction is deferred.

```
await renderMarkdownToPdf("report.md", {
  theme: "professional",
  force: true,
});
```

Recommendation

Use the professional theme for polished reports that still need a small, auditable Markdown source.

Ready for review

This report was generated from Markdown with Marky's professional PDF theme.
